RAČUNARSKE I VEB PREZENTACIJE

Nastavnik: Mladen Janković

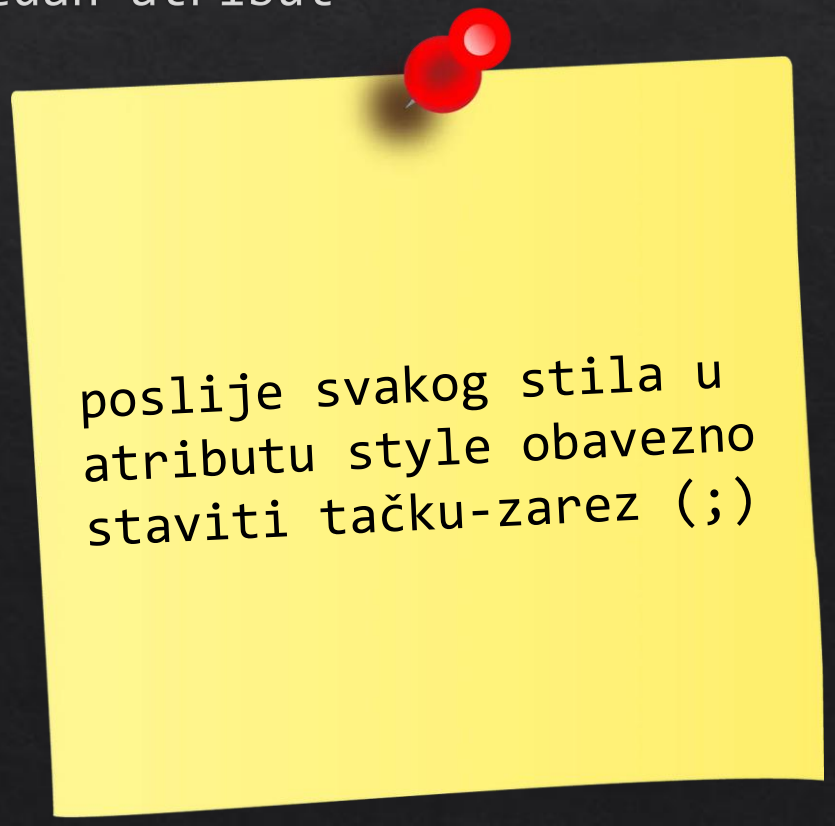

Tema: HTML element – dodavanje slika, mapa slike

w3schools.com

atributi <img> elementa

- **src** - Određuje putanju do slike
- **alt** - Određuje alternativni tekst za sliku. Atribut alt obezbjeđuje alternativni tekst za sliku, ako korisnik iz nekog razloga ne može da je vidi (zbog spore veze, greške u atributu src ili ako korisnik koristi čitač ekrana).
- **width, height** - Atributi širine i visine definišu širinu i visinu slike u pikselima. Uvijek navedite širinu i visinu slike. Ako širina i visina nisu navedene, veb stranica može da treperi dok se slika učitava. Dimenzije mogu biti navedene u pikselima (width="500" height="600"), a mogu i u procentima koliko stranice zauzimaju (width="50%" height="30%"). Kod zadavanj adimenzija treba voditi računa da se slika ne deformiše pa možete zadati samo jednu dimenziju a druga sama da se odredi u zavisnosti od zadane.

- Ukoliko želite da se oko slike obmotava tekst onda morate da koristite stilove. Pomoću stilova može se podesiti i dimenzija slike.
- za obmotavanje teksta dodati atribut
  - style="float:right" (float stil može da ima i vrijednost left)
- za davanje dimenzija preko stilova treba dodati atribut
  - style="width:42px; height:42px;" (a mogu i procenti width:50%;)
- Svi stilovi za jedan element mogu da se stave u jedan atribut
  - style="float:left; width:42px; height:42px;"

Slika može da bude link

```
<!DOCTYPE html>
<html>
<body>

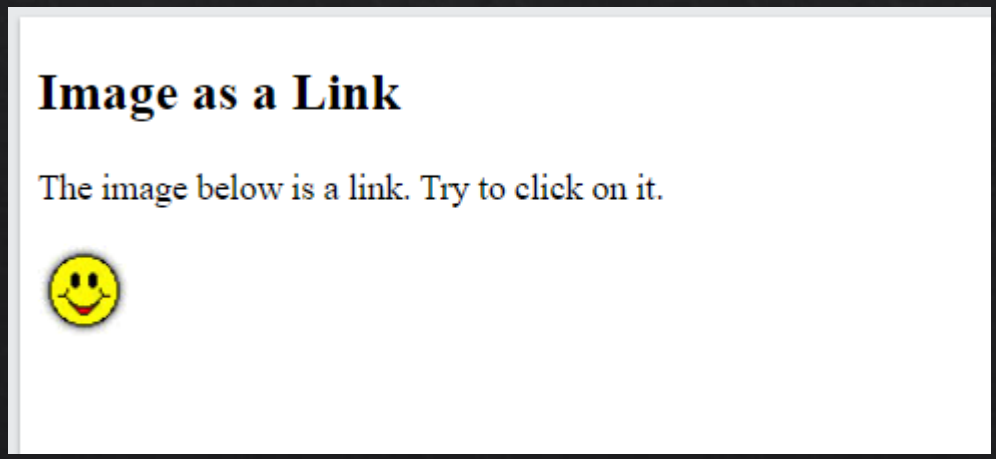

<h2>Image as a Link</h2>

<p>The image below is a link. Try to click on it.</p>

<a href="default.asp"><img src="smiley.gif" alt="HTML tutorial" style="width:42px;height:42px;"></a>

</body>
</html>
```

Klikom na sličicu pokreće se link default.asp

SRC atribut

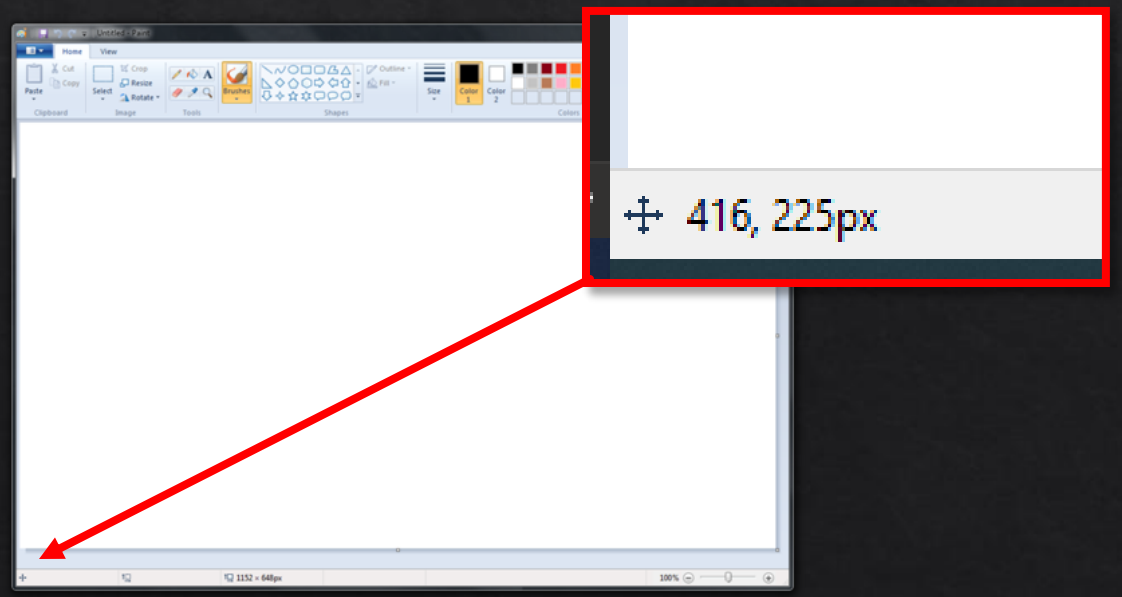

- `<img src="/images/html5.gif" style="width:128px;height:128px;">`
- `<img src="https://www.w3schools.com/images/w3schools_green.jpg">`

Ekstenzije slika

- .jpg .jpeg
- .png
- .gif

Koordinate slike

- Najlakše odrediti koordinate u programu PAINT
- Otvorite sliku i u donjem lijevom uglu su ispane koordinate pozicije miša na slici

<map>

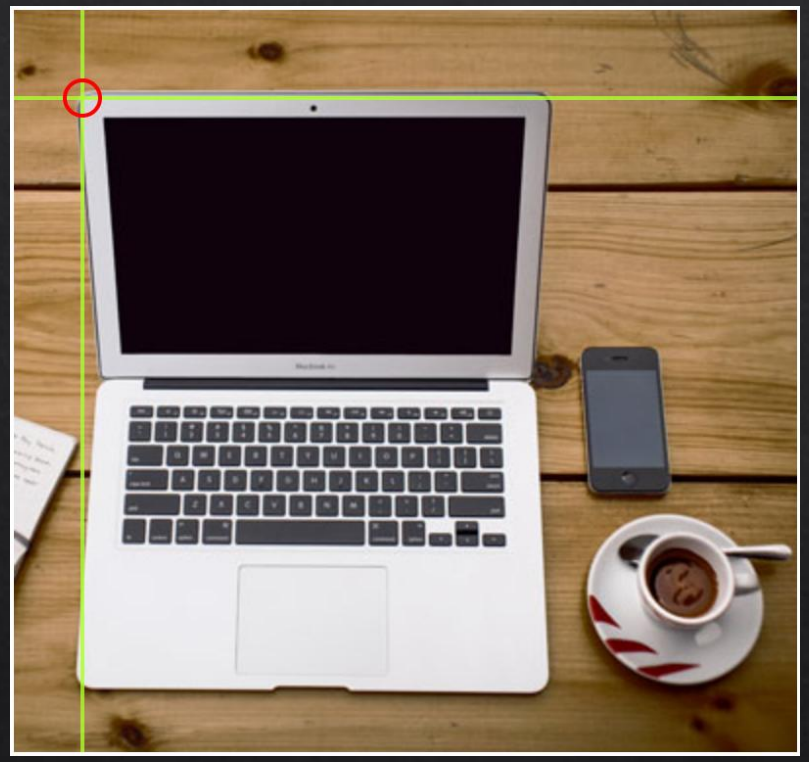

```
<img src= " " usemap="#workmap">

<map name="workmap">
   <area shape=" " coords=" " href=" " >
   <area shape=" " coords=" " href=" " >
   ...
</map>
```

Atribut SHAPE

- rect - pravougaonir
- circle - krug
- poly - mnogougao

shape="rect" coords="x1,y1,x2,y2"

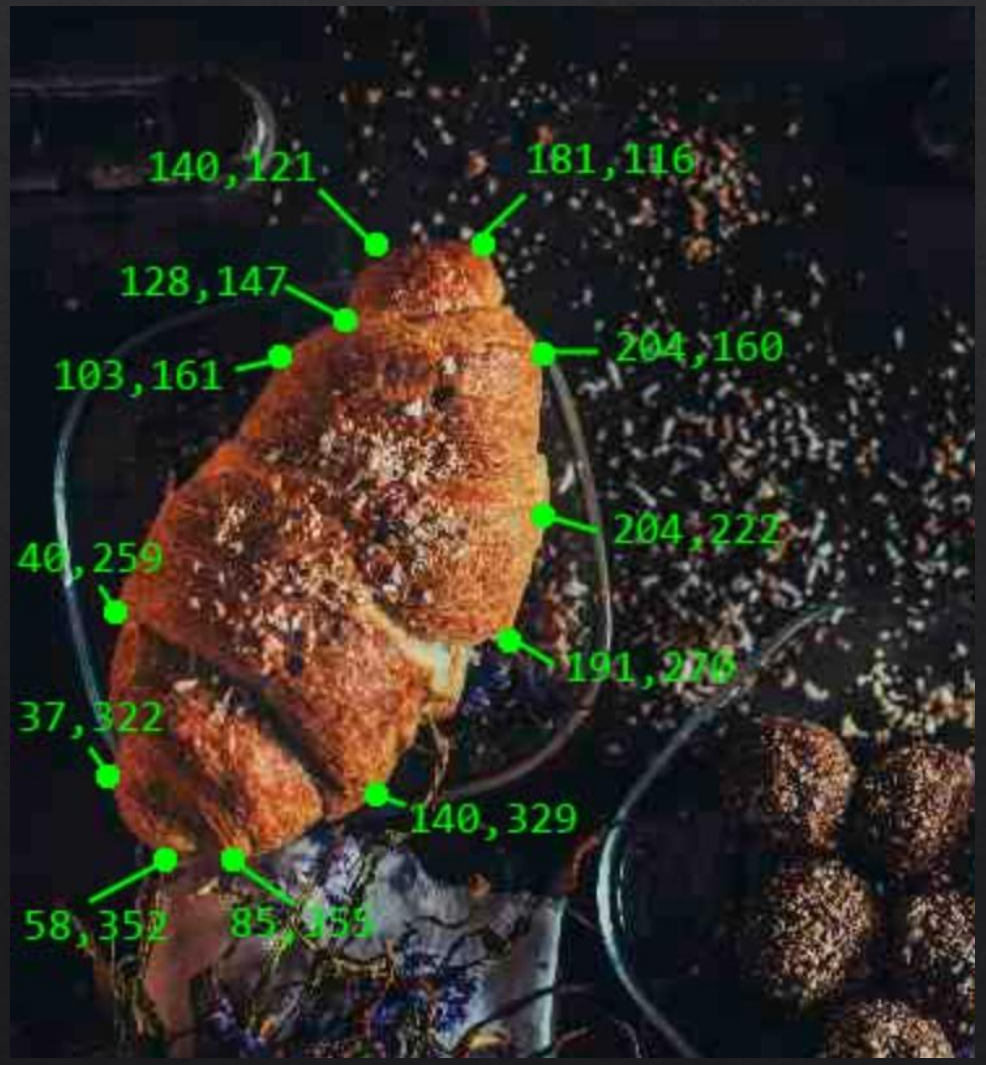

shape="circle" coords="x1,y1,r"

shape="poly" coords="x1,y1,...,xn,yn"

```html
<!DOCTYPE html>

<h2>Image Maps</h2>
<p>Click on the computer, the phone, or the cup of coffee to go to a new page and read more about the topic:</p>

<img src="workplace.jpg" alt="Workplace" usemap="#workmap" width="400" height="379">

<map name="workmap">
  <area shape="rect" coords="34,44,270,350" alt="Computer" href="computer.htm">
  <area shape="rect" coords="290,172,333,250" alt="Phone" href="phone.htm">
  <area shape="circle" coords="337,300,44" alt="Cup of coffee" href="coffee.htm">
</map>

</body>
</html>
```

Image Maps

Click on the computer, the phone, or the cup of coffee to go to a new page and read more about the topic:

Slika kao pozadina

- Pomoću CSS-a
- style="background-image: url('img_girl.jpg');"

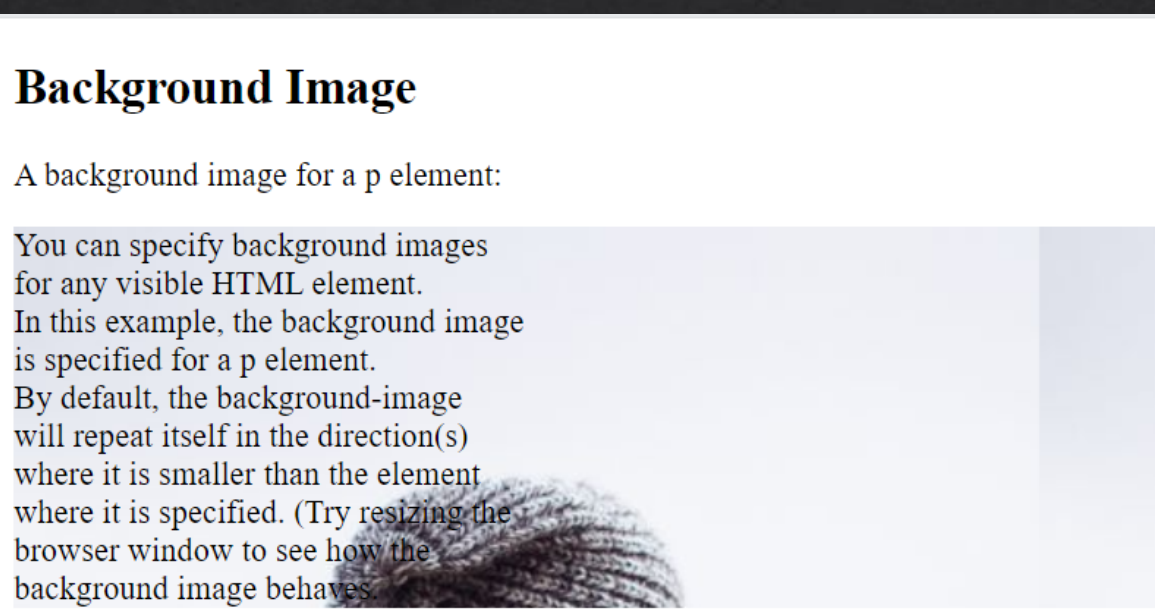

```
<!DOCTYPE html>
<html>
<body>

<h2>Background Image</h2>

<p>A background image for a p element:</p>

<p style="background-image: url('img_girl.jpg');">
You can specify background images<br>
for any visible HTML element.<br>
In this example, the background image<br>
is specified for a p element.<br>
By default, the background-image<br>
will repeat itself in the direction(s)<br>
where it is smaller than the element<br>
where it is specified. (Try resizing the<br>
browser window to see how the<br>
background image behaves.
</p>

</body>
</html>
```

```html
<!DOCTYPE html>
<html>
<head>

</head>
<body style="background-image: url('example_img_girl.jpg');">

<h2>Background Repeat</h2>

<p>By default, the background image will repeat itself if it is smaller than the element where it is specified, in this case the body element.</p>

</body>
</html>
```

```html
<!DOCTYPE html>
<html>
<head>

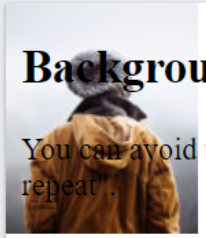

</head>

<body style="   background-image: url('example_img_girl.jpg');
                background-repeat: no-repeat;">

<h2>Background No Repeat</h2>

<p>You can avoid the image from being repeated by setting the background-repeat property to "no-repeat".</p>

</body>
</html>
```

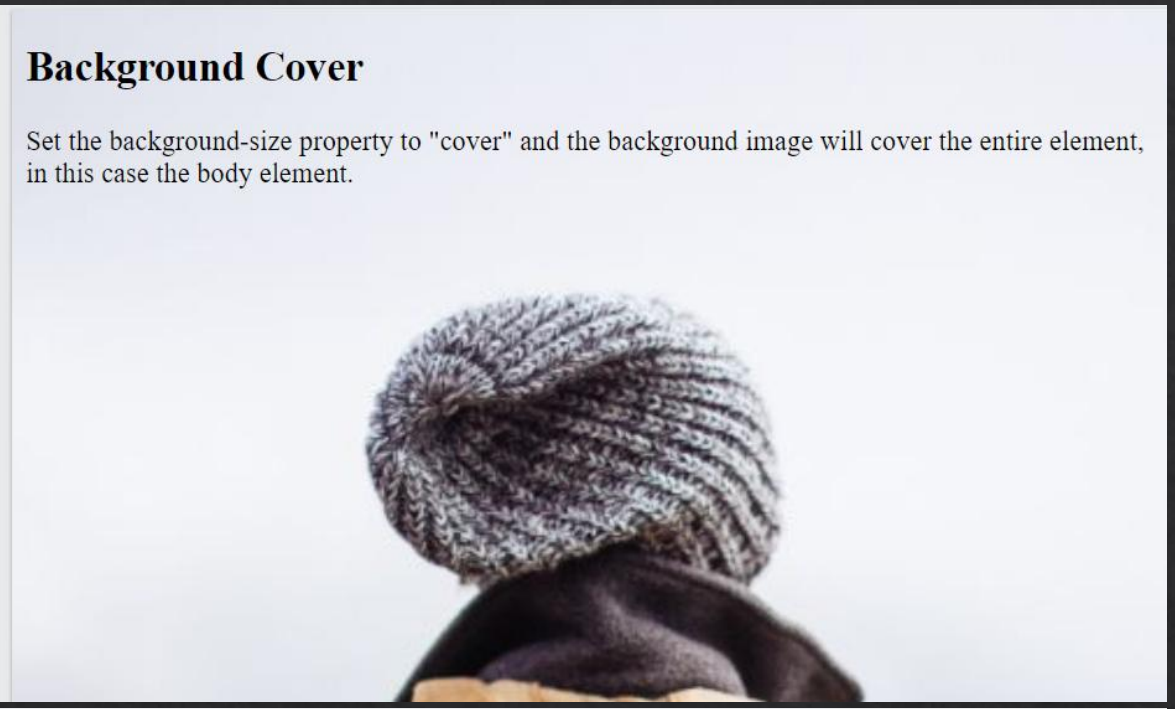

```html
<!DOCTYPE html>
<html>
<head>
<style>
body {

}
</style>
</head>
<body style="
            background-image: url('img_girl.jpg');
            background-repeat: no-repeat;
            background-attachment: fixed;
            background-size: cover;">

<h2>Background Cover</h2>

<p>Set the background-size property to "cover" and the background image will cover the entire element, in this case the body element.</p>

</body>
</html>
```

```html
<!DOCTYPE html>
<html>
<head>
<style>
body {

}
</style>
</head>
<body style="
              background-image: url('img_girl.jpg');
              background-repeat: no-repeat;
              background-attachment: fixed;
              background-size: 100% 100%;">

<h2>Background Stretch</h2>

<p>Set the background-size property to "100% 100%" and the background image will be stretched to cover the entire element, in this case the body element.</p>

</body>
</html>
```

<picture>

- U zavisnosti od veličine ekrana ili uređaja učitava različite slike
- Element je dobar ukoliko želite da se za različite uređaje učitava ista slika ali u različitim formatima

```
<picture>
  <source media="(min-width: 650px)" srcset="img_food.jpg">
  <source media="(min-width: 465px)" srcset="img_car.jpg">
  <img src="img_girl.jpg" style="width:auto;">
</picture>
```

```

The picture Element

- Neki pregledači ili uređaji možda neće podržavati sve formate slika. Korišćenjem elementa <picture> možete dodati slike svih formata, a pretraživač će koristiti prvi format koji prepozna i ignorisati bilo koji od sledećih elemenata.

```
<picture>
  <source srcset="img_avatar.png">
  <source srcset="img_girl.jpg">
  <img src="img_beatles.gif" alt="Beatles" style="width:auto;">
</picture>
```

Prikazivanje ikonice u kartici (tabu)

- Za ikonicu u kartici možete staviti svaki format slike koji podržava pretraživač u kojem je otvorena stranica

```
<head>
  <title>HTML Tutorial</title>
  <link rel="icon" type="image/x-icon" href="/images/favicon.ico">
</head>
```

Domaći

- Pored stranica iz prethodnih domaćih (index.html, o_temi.html, galerija.html) treba dodati dodati stranicu mapa.html. Na početku svake stranice stoje linkovi ka ostalim stranicama (neka vrsta menija za vaš sajt)
- mapa.html sadrži
  - barem jednu sliku koja će sadržati barem tri linka (<map>)
- Dorada na stranicama:
  - stranica o_temi.html treba da sadrži element <picture>
  - sve stranice u tabu (kartici) pretraživača moraju da imaju ime i prezime učenika i ikonicu koja je vezana za temu
